

# INDUSTRY'S FIRST 100% MICROFILTRATION WASH SYSTEM

Our Clean Water Wash system has no filter cup that needs to be periodically cleaned, and no chopper. In fact, the entire system is maintenance-free and filters 100% of water from the wash and rinse cycles through a micro-filter.

The only visible filtration component of the Clean Water Wash system is the coarse filter in the bottom of the tub. The rest of the high-performance system is below the tub within the pump assembly.

Coarse Filter

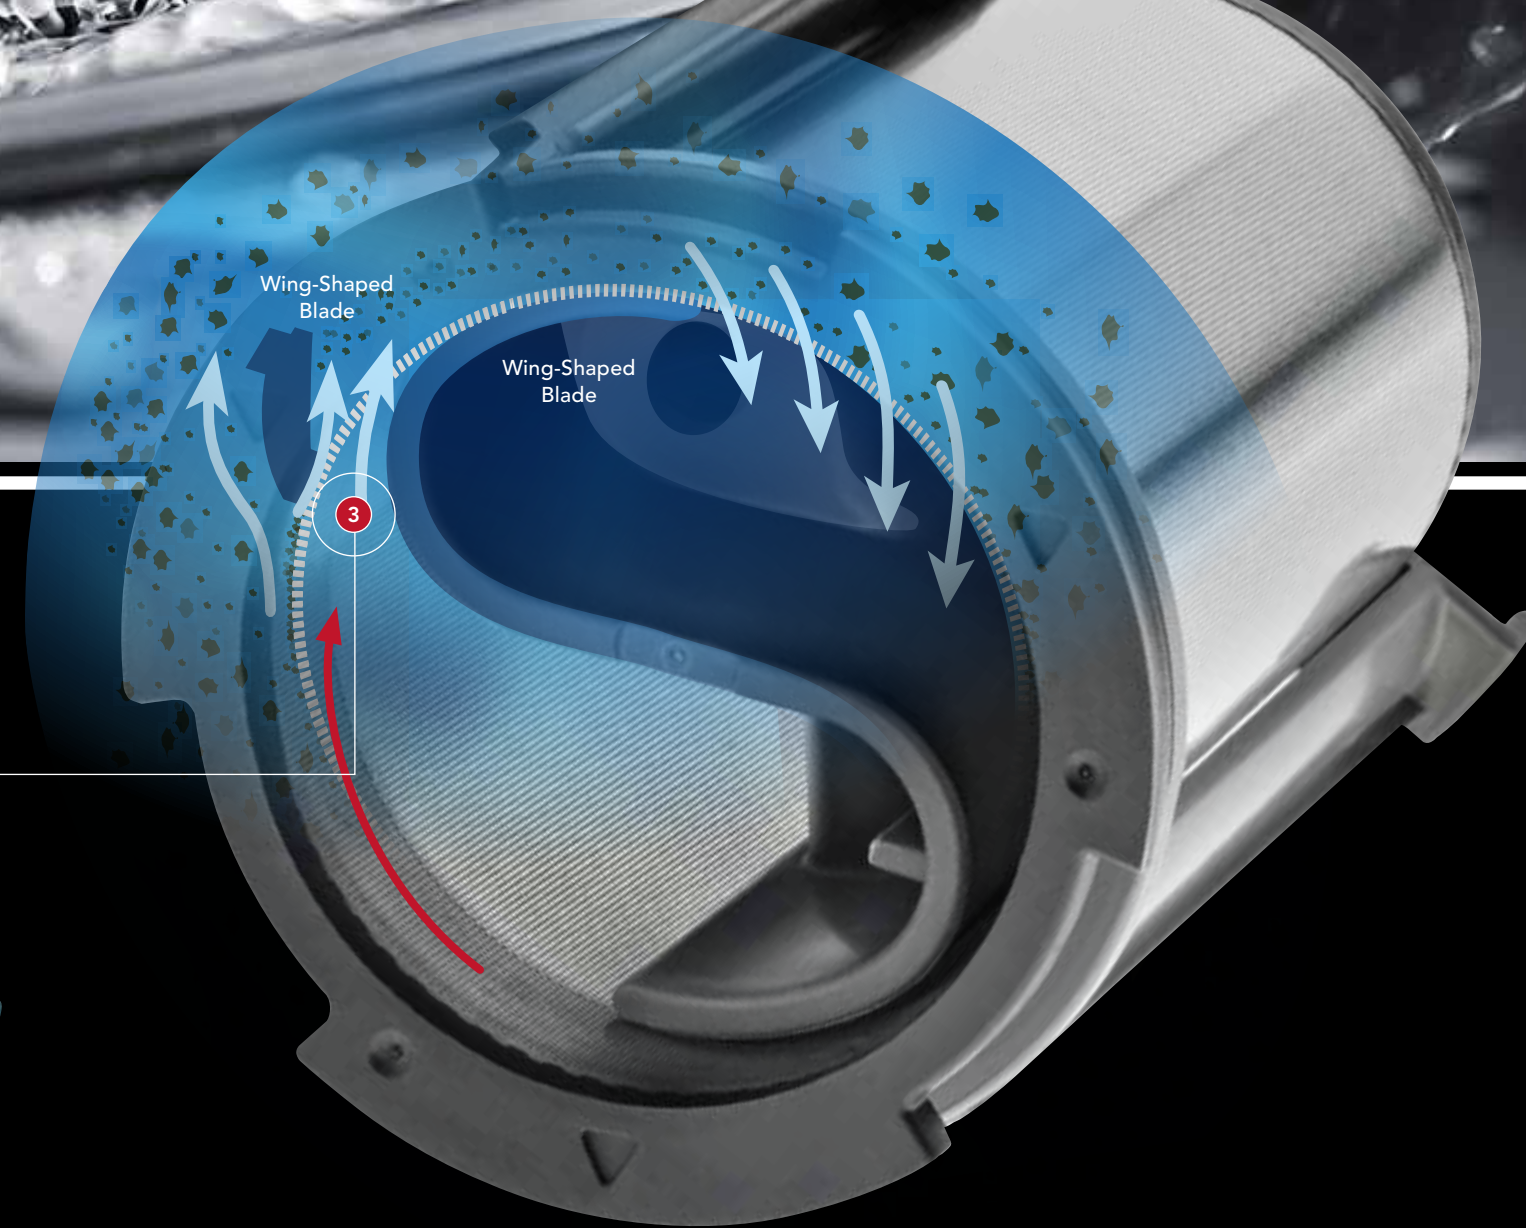

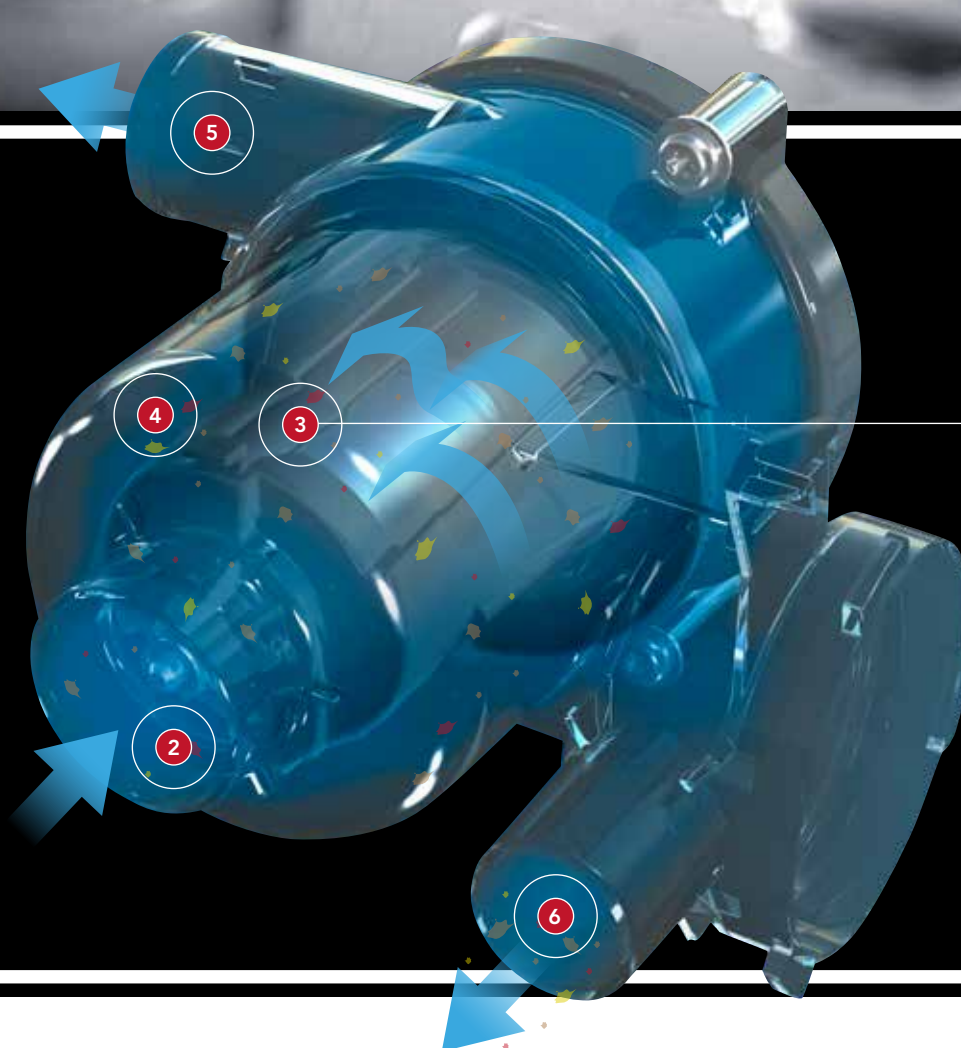

## FASTER CLEANING, LESS ENERGY AND WATER

The Clean Water Wash system does all this while actively filtering 100% of the water from the wash and rinse cycles through a maintenance-free micro-filter that can remove particles as small as the period at the end of this sentence. This continuous filtration by the Clean Water Wash system shortens cycle times, reducing water usage and overall energy consumption.

### HOW THE CLEAN WATER WASH SYSTEM DELIVERS RESULTS

- 1 Water and food particles flow through the coarse filter into the filter housing.
- 2 An impeller pulls wash and rinse water into the spinning clean water wash micro-filter.
- 3 Two sets of wing-shaped blades located inside and outside the filter create back pressure to clean the filter.
- 4 Food particles remain suspended inside the filter housing.
- 5 Filtered water is pumped back through the wash arms.
- 6 During draining, a secondary pump flushes out suspended food particles and soils.

The Clean Water Wash filtration system is just one of many advanced features that help make KitchenAid the Best Performing Dishwasher Brand without rinse aid.\*

\* Combined wash and dry results of leading premium brands.
