INDUCTION COOKTOP MODEL KICU500XBL/SS

EXCEPTIONAL POWER AND CONTROL

★ **Unsurpassed Responsiveness**

★ **Boost Power to All Elements**

★ **Ultimate Control**

UNSURPASSED RESPONSIVENESS

Go from Boil to Simmer 40% Faster*

Faster than standard electric cooktops, the KitchenAid® Induction Cooktop responds immediately to any heat setting changes, allowing the cook to go from boil to simmer in a matter of seconds. Once the power level is set, heating is sure and steady.

This is Advanced Cooking Technology

The KitchenAid® Induction Cooktop uses electromagnetic energy to generate instant heat right into the cookware. Meals cook faster — and virtually all of the energy the cooktop generates goes straight to heating the cookware.

* Than a conventional electric cooktop.

BOOST POWER TO ALL ELEMENTS

With the Performance Boost function available to all elements, the cook is free to manage the meal instead of the cooktop.

Compared to some other induction cooktops, there is no choosing which element has the boost function. So the cook can quickly bring all pots, pans and food to temperature without having to move them to a “special” element with boosted power.

ULTIMATE CONTROL

Touch-Activated Controls

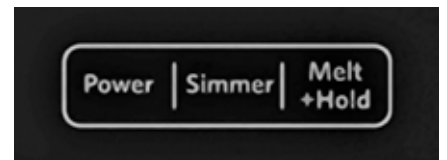

A simple touch puts the cook in control of nine precisely calibrated temperature settings. There is no guessing if the flame level is just right, or worrying about wide fluctuations of temperatures that most traditional electric cooktops deliver.

To repeat a culinary success, the cook duplicates the power-level setting used the last time a particular recipe was prepared.

Melt & Hold Function

Say “good-bye” to the double boiler. Cooks can melt butter or chocolate and hold it without scorching. This feature is an excellent example of the precise control that is simply unequalled with any other kind of cooktop.

Simmer Function

Set it and forget it. The simmer function maintains the ideal temperature for the lengthy reduction of a sauce or simmering a soup or stew.
