

A **SLIDE-IN** FOR A NEW KITCHEN DESIGN ERA

When it comes time to update existing appliances, nobody wants to remodel unless it's necessary. That's why KitchenAid® slide-in ranges are designed to fit either a traditional slide-in or freestanding range opening without the need for extensive remodeling or countertop replacement.

85% of North American households have a standard, 30-inch range opening*

KitchenAid®

A SLIDE-IN THAT FITS

85% of North American households have a 30-inch range opening for either a traditional slide-in or freestanding range. The new KitchenAid® slide-in ranges are designed to fit in either opening and provide a built-in look.*

These slide-in ranges are full-depth, meaning that they install without needing extra trim pieces to easily offer a seamless, sophisticated design. Whether Gas, Dual-Fuel, Induction, Electric or Downdraft, KitchenAid® slide-in ranges offer a fuel type to suit any cooking style, design taste or installation requirement.

Traditional freestanding ranges prominently stick out from the backsplash and countertop, interrupting the kitchen design, and traditional slide-in ranges have special installation requirements.

KitchenAid® slide-in ranges truly integrate with cabinetry and countertops, installing flush to the wall or backsplash and enhancing the kitchen's design aesthetic.

Full-Depth Design

KITCHENAID® SLIDE-IN RANGE

The new KitchenAid® slide-in ranges are full-depth, fitting into a standard range opening with the ease of a freestanding range and the aesthetic appeal of a traditional slide-in range with, front-located controls and clean integration with countertops and cabinetry.

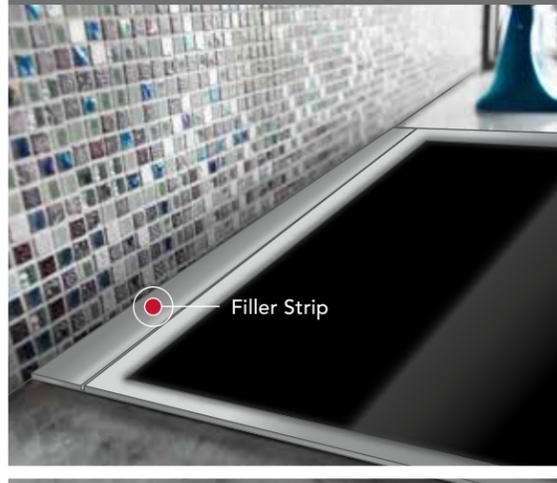

FREESTANDING RANGE

Freestanding ranges have an integrated backsplash that also contains the controls for the cooktop and oven. The controls do not install flush to the kitchen wall and countertop, standing proud from the wall and interrupting the lines of the countertop.

TRADITIONAL SLIDE-IN RANGE

A traditional slide-in range locates all its controls in the front of the range, where they can be easily accessed. Slide-in ranges also mount into the countertop itself, requiring a filler piece of countertop or trim behind the range.

Filler Strip

Pairing a new KitchenAid® slide-in range with a KitchenAid® microwave hood combination oven consolidates four cooking appliances into two, providing a high-powered, space-efficient kitchen design.

THE FIT SYSTEM LIMITED GUARANTEE**

While the vast majority of American households have a standard-width, 30-inch range opening, traditional slide-in ranges often have an extra piece of trim or countertop between the back of the range and the kitchen wall or backsplash. If replacing a traditional slide-in range with a KitchenAid® slide-in range, KitchenAid® will provide up to \$100 to pay for professional countertop modifications to ensure the range will properly fit.

Visit www.kitchenaid.com/fitsystemlimitedguarantee for complete details.

** Does not apply to KSDG950E and KSEG950E.

STEAM RACK

This specialized oven rack offers the ability to provide additional moisture to the oven.

Using a water reservoir integrated with the rack and a dedicated set of oven cycles, cooks can help foods retain their moisture and flavors.

Available cycles include Bread, Fish, Dessert and Refresh/Reheat.

WIRELESS MEAT PROBE

Coming standard with select models of KitchenAid® slide-in ranges in all fuel types, this wireless meat probe accurately measures the internal temperatures of meats, poultry and liquid-based casseroles, allowing cooks to walk away from the range without walking away from control.
