START THE CONVERSATION

What qualities do you expect from food you cook in the microwave?

THIS MODEL OFFERS:
Crisp Element

TOP FEATURES

CRISP ELEMENT

A calrod element delivers 1200 Watts of top-down heat in the microwave enabling the Dual Crisp, Brown and Keep Warm Settings.

STAINLESS STEEL CAVITY

The stainless steel microwave cavity is designed to resist the splatter from any messy meal.

MULTIPLE SPEED EXHAUST FAN

This 400 CFM motor class multiple speed exhaust fan helps remove smoke and odors as you cook on your range.

DID YOU KNOW?

Microwaves use a magnetron to generate electromagnetic waves that get absorbed by the water, sugar and fats in your food, generating heat and drawing moisture toward the outside of food. Conventional cooking dries the exterior of food allowing it to form a crispy crust. This model combines microwave cooking with top-down heat of conventional cooking to enable crisping in the microwave.

DEMO

Open this microwave to show customers the calrod element located at the top of the cavity. Let them know that this 1200 watt element delivers top down heat in the microwave. Point out the Dual Crisp, Brown and Keep Warm buttons on the control panel that are enabled by this element.
