24" DRYER CONTRACT EXCLUSIVE MODEL | 4.3 CU. FT. HEAT PUMP DRYER

Matching Washer WFW3090GW

W10882520

WFP24GW

Available color

W | White

Heat Pump Technology

Our **most efficient** compact dryer technology uses a **ventless** heat pump design to take the next step in energy efficiency.

HOW: The heat pump system uses a refrigerant system that can be both heated and cooled.

Hot air coming out of the drum is cooled by the system and water vapor is captured. The system then heats up the air and recirculates it back through the drum.

HINT: Imagine the savings and convenience of not installing dryer venting.

Installation Options

If you have space constraints or want your washer and dryer elevated, a stack kit or 12" pedestal are available.

HOW: The stack kit (W10882520) allows the dryer to be installed on top of the washer. A 12" pedestal (WFP24GW) raises the washer and dryer to a more comfortable working height and the large drawer provides convenient storage.*

HINT: Neither the stack kit or pedestal ship with the product but can be ordered by calling 1-866-698-2538 or by visiting www.whirlpool.com/accessories

Water Tank

The water tank is located to the left of the user interface, and if used should be emptied between loads.

WHY: Because the heat pump draws the moisture out of the load being dried there needs to be a place for the water to collect.

HINT: Remove the step of emptying the water tank by using the supplied drain hose.

#1 SELLING APPLIANCE BRAND IN THE U.S.A.**
