Why Small Spaces?

Price per square foot is increasing, people are downsizing but still looking for key features in an oven.

Flexibility allows consumers to cook how they want. They can discover sleek designs and features that make clean up easy without sacrificing capacity.

Connectivity provides the convenience to monitor a meal from another location, freeing consumers up to do other things.

Small Space Living

Urban living continues to be a small space focus. Cities are expanding and 80.7% of the U.S. population now lives in urban areas.* Urban building is projected to continue growing, with the pipeline for high-rise projects projected to increase tremendously.

The average unit size has fallen from almost 1,000 sq. ft. in 2001-2005 to approximately 900 sq. ft. in 2001-2019.** A record 13% of apartments sold in 2019 were less than 260 sq. ft. or smaller than two car-parking spaces.†
