

# Understanding KitchenAid® Intelligent Auto Fill

Intelligent Auto Fill makes accessing water easy and convenient. It lets you set your cup down and have it filled correctly, hands-free. AI intelligently senses when your cup is within the dispenser, your glass is off-center, or can even detect when a hand pulls your cup away, ensuring an easy, “set and forget” water-filling experience.

## INTELLIGENT AUTO FILL FAQs

### WHAT EXACTLY IS “INTELLIGENT AUTO FILL”?

It is a hands-free dispensing system that uses sensors and an integrated camera to identify a container and dispense water automatically. It stops on its own when the vessel is between 65% and 85% full, depending on the container’s shape.

### CAN IT FILL ANY SIZE CONTAINER?

It is highly versatile. The dispenser area fits containers up to 14 inches (35.6 cm) tall. For the best hands-free experience, containers should be between 2” and 11” tall and 1.5” to 7” wide.

### HOW SIMPLE IS IT TO USE?

**Place:** Center the glass on the dispenser tray using the graphics as a guide.

**Step Back:** Remove your hand.

**Fill:** The system senses the container, starts filling, and shows a counting animation on the LCD display.

### WHAT IF I WANT MY GLASS FILLED TO THE VERY TOP?

To prevent spills, the auto-fill stops slightly below the rim. If a user wants it fuller, they can simply press and hold the Pour/Stop button to top it off manually.

### DOES IT WORK IF I PUT ICE IN THE GLASS FIRST?

Yes. It is actually recommended to add ice before using the automatic water fill. The sensors account for the ice volume to prevent overfilling.

### WHY IS THERE A CAMERA? IS MY PRIVACY PROTECTED?

The camera is a core functional sensor used strictly to identify the container in the dispense well. It only enables when the dispenser is active, it does not record audio, and images are used solely to improve filling algorithms.

### WHAT HAPPENS IF THE CONTAINER ISN'T CENTERED?

The LCD screen will show a “Centralization Animation” with directional arrows to help the user align the vessel with the nozzle. An alert tone will also play every 5 seconds until it is centered.
